1 Web Scraping & Data Handling Challenge

1.0.1 Website:

JustWatch - https://www.justwatch.com/in/movies?release_year_from=2000

1.0.2 Description:

JustWatch is a popular platform that allows users to search for movies and TV shows across multiple streaming services like Netflix, Amazon Prime, Hulu, etc. For this assignment, you will be required to scrape movie and TV show data from JustWatch using Selenium, Python, and BeautifulSoup. Extract data from HTML, not by directly calling their APIs. Then, perform data filtering and analysis using Pandas, and finally, save the results to a CSV file.

1.0.3 Tasks:

1. Web Scraping:

Use BeautifulSoup to scrape the following data from JustWatch:

a. Movie Information:

- Movie title
- Release year
- Genre
- IMDb rating
- Streaming services available (Netflix, Amazon Prime, Hulu, etc.)
- URL to the movie page on JustWatch

b. TV Show Information:

- TV show title
- Release year
- Genre
- IMDb rating
- Streaming services available (Netflix, Amazon Prime, Hulu, etc.)
- URL to the TV show page on JustWatch

c. Scope:

- Scrape data for at least 50 movies and 50 TV shows.
- You can choose the entry point (e.g., starting with popular movies, or a specific genre, etc.) to ensure a diverse dataset.

2. Data Filtering & Analysis:

After scraping the data, use Pandas to perform the following tasks:

a. Filter movies and TV shows based on specific criteria:

- Only include movies and TV shows released in the last 2 years (from the current date).
- Only include movies and TV shows with an IMDb rating of 7 or higher.

b. Data Analysis:

- Calculate the average IMDb rating for the scraped movies and TV shows.
- Identify the top 5 genres that have the highest number of available movies and TV shows.
- Determine the streaming service with the most significant number of offerings.

3. Data Export:

- Dump the filtered and analysed data into a CSV file for further processing and reporting.
- Keep the CSV file in your Drive Folder and Share the Drive link on the colab while keeping

Submission:

- Submit a link to your Colab made for the assignment.
- The Colab should contain your Python script (.py format only) with clear comments explaining the scraping, filtering, and analysis process.
- Your Code shouldn't have any errors and should be executable at a one go.
- Before Conclusion, Keep your Dataset Drive Link in the Notebook.

Note:

1. Properly handle errors and exceptions during web scraping to ensure a robust script.
2. Make sure your code is well-structured, easy to understand, and follows Python best practices.
3. The assignment will be evaluated based on the correctness of the scraped data, accuracy of data filtering and analysis, and the overall quality of the Python code.

  <p>
    Congrats. You are currently using several filters at the same time.
    For example a combination of different streaming providers, genres or release
    years.

    <br/>
    With one click on the reset button you'll easily see all content
    again. The JustWatch Watchbar automatically saves your individual filter settings
    for the Popular-View (where you are right now). It also works individually for
    the New-Timeline and the Search-Results.

    <br/>
    This way you can customize JustWatch as you like. For example you
    can just show content of your favorite streaming providers, release years or
    genres.

 hope is finding a cure and keeping the infected contained. When a clumsy
 deadbeat accidentally kills his landlord, he must do everything in his power to
 hide the body, only to find that the distractions of lust, the death of his
 beloved brother, and a crew of misfit characters force him on a journey where a
 fortune awaits him.", "WEBAPP_PLOT_RECOMMENDER_SYNOPSIS_2":"As an epidemic of a
 lethal airborne virus - that kills within days - rapidly grows, the worldwide
